Hide Keyboard Extension

```kotlin
// --------- Hide Keyboard Extension ------------
new *
fun Activity.hideKeyboard() {
    val imm: InputMethodManager =
        getSystemService(Activity.INPUT_METHOD_SERVICE) as InputMethodManager
    val view = currentFocus ?: View( context: this)
    imm.hideSoftInputFromWindow(view.windowToken, InputMethodManager.HIDE_NOT_ALWAYS)
}

new *
fun Fragment.hideKeyboard() {
    activity?.apply { this: FragmentActivity
        val imm: InputMethodManager =
            getSystemService(Activity.INPUT_METHOD_SERVICE) as InputMethodManager
        val view = currentFocus ?: View( context: this)
        imm.hideSoftInputFromWindow(view.windowToken, InputMethodManager.HIDE_NOT_ALWAYS)
    }
}
```

Extension Calling

```kotlin
hideKeyboard()
```
